

SOUNDCOMMANDER® SC1000LS, LAND/SEA MOUNTED LOUDSPEAKER/PA SYSTEM

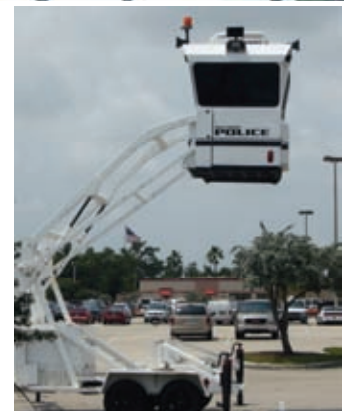

The **SOUNDCOMMANDER®** Land/Sea (SC1000LS) is a vehicle or facility-mounted version of the SOUNDCOMMANDER 1000 series of loudspeaker systems. The system is designed to be permanently mounted in a vehicle, building, tower or watercraft. It draws power directly from the vehicle's or facility's 12VDC power source or through an optional 24-30VDC to 12VDC voltage converter. It can also be operated using the optional external 110VAC – 230VAC AC power supply.

The SC1000LS includes an Amplifier/Control module with the same controls and capabilities as all SC1000 systems. It is usually installed with two SOUNDCOMMANDER reentrant horn marine grade loudspeakers with roof-mount or pole-mount hardware.

The systems can also be provided with three or four loudspeakers. For a four speaker arrangement a speaker selection box that allows individual and combination speaker selection is provided. Although it can use any style of SoundCommander microphone, it typically is delivered with a push-to-talk microphone and mounting bracket. The system can also be ordered with a desk top microphone instead. The SC1000MC system is similar to the SC1000LS system but it also includes a rechargeable 12VDC 7.5Amp Hr. internal battery pack.

The SC1000LS also can be installed with optional VHF or UHF wireless microphone capability which includes a plug on wireless remote transmitter and carry pouch, internal receiver and roof-top mounted antenna kit.
